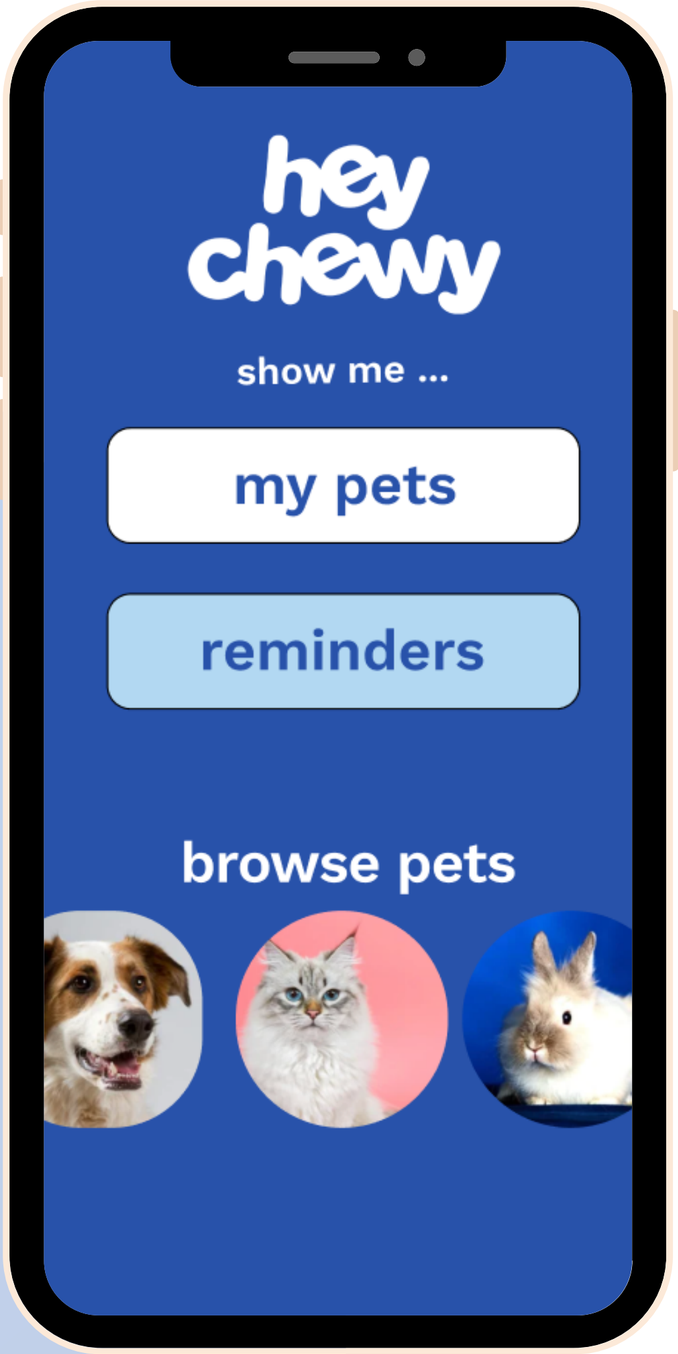
PET HEALTH

Love them like family,

Treat them like family

hey chewy

HeyChewy is a
dif - fur - ent
experience for every
type of pet owner.



Project *overview*

HeyChewy is a mobile application that is compatible with both iOS and Android devices.

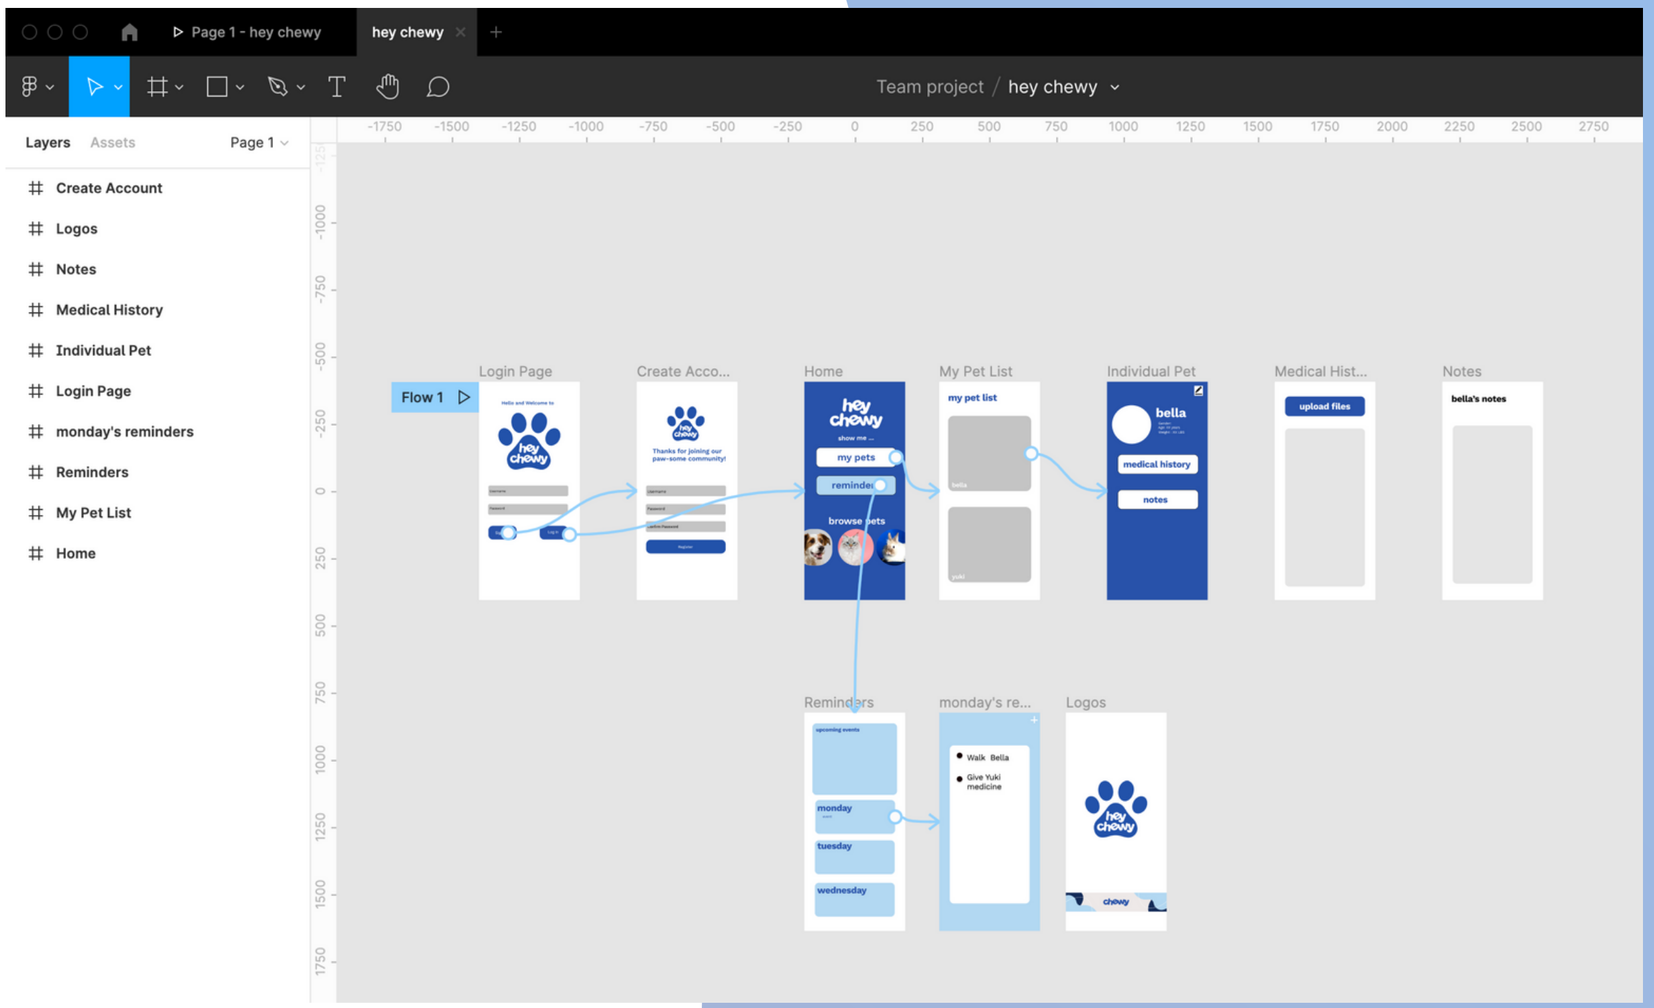
The main components of our app include:

- creating pet profile(s)
- upload of PDFs or scanned documents
- keeping track of pet(s) medical records
- storing major reminders (ex. 6 month check up)
- daily to-do list
- additional notes

We were able to create this purr-fect app with the React Native Framework, with plans to connect it to a MySQL database.

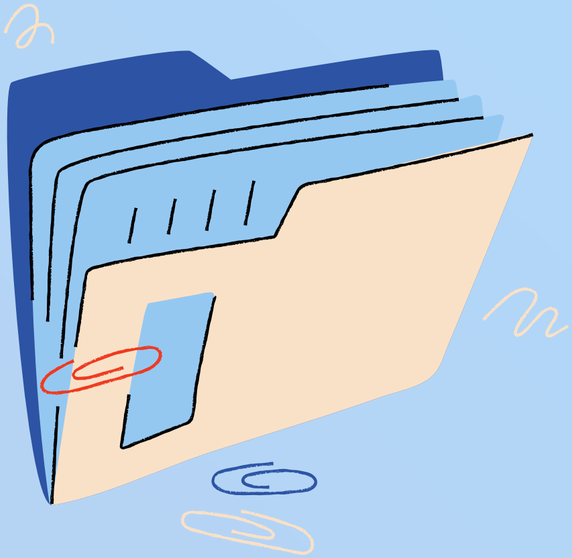
hey chewy

the design process



Our team made the most of the popular design tool Figma. This is where the idea came to life!

Creating a prototype helped us to stay focused on what is actually necessary to keep track of an animal's overall Pet Health.



Planning Ahead

To keep us all accountable amongst different timezones, we utilized a Trello board to help us visualize the progress of our application.

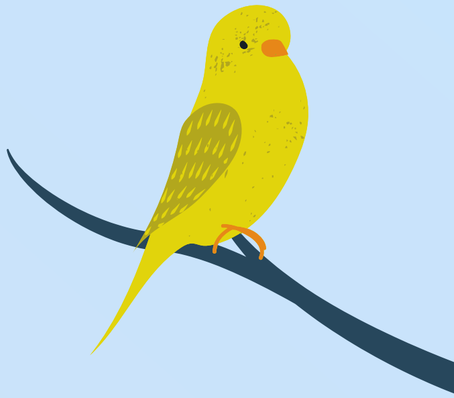
the hey chewy process



Our Approach

HeyChewy was born after a very collaborative initial meeting between our group. We decided to include all of our ideas into a space where pet owners of all types can make the most of our application. With the majority of the group being a newbie to the React Native Framework, we began our focus on UI Design. Individually, we all took some time to learn more about the syntax of the language before beginning the development phase.

Our Solution

Pets of all kinds are considered family members to most and it's time to take care of them like family. Our app HeyChewy primarily focuses on pet health. Within our application users are allowed to upload any important medical papers and take note of health conditions, if needed.

Animals come in all different fun shapes and sizes and we wanted to apply that same attitude with HeyChewy. No two users will have the same layout, HeyChewy aims to be fully customizable.

for a live demo!

Future Planning

Create Account

- Implement an email sign up
- Introduce a proper back end

Pet Profile

- Allow Photo Editing

Medical Records

- Utilize AI to scan records to automatically create a form

Reminders

- Send alerts to mobile device

hey chewy

Thank you all for listening in!

any questions?
